## Physics 201 Midterm Exam 1 6/28/2016

ID:

Collaboration is not allowed. Allowed on your desk are: up to ten 8.5 x 11 inch doubled sided sheets of notes that are bound together, non-communicating/graphing scientific calculator, 1 page of scratch paper, writing utensils, and the exam. You will have 50 minutes to complete this exam.

(10 points) An unidentified flying object maintains a constant acceleration for 2.50 s. The acceleration during this time is 10 m/s<sup>2</sup> in the eastern direction and 4 m/s<sup>2</sup> in the southern direction. The final velocity of the object is 15 m/s in the eastern direction and 10 m/s in the southern direction. (a) What was the initial velocity of the object? (b) Draw a physical representation of the initial, final, and change in velocity.

$$\vec{a} = \frac{\vec{v}_{f} - \vec{v}_{i}}{\Delta t} \Rightarrow \vec{v}_{f} = \vec{v}_{f} - \vec{a} \Delta t \qquad b) \qquad \vec{v}_{i} = \sqrt{15, -10} \sqrt{m} s - \sqrt{10, -4} \sqrt{m} s^{2} (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{-10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{-10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad (2.55) \qquad \qquad \vec{v}_{i} = \sqrt{10, 0} \sqrt{m} s \qquad \qquad \vec{v}_{i$$

(c) 2pt - definition 0 (b) lpt each vector
 lpt - N,S,E,W→ Cartesian
 3pt - solving Vi
 lpt - answer w/ units

For questions 2 through 4 circle all correct answers, a given problem may have more than one correct answer. Each correctly circled answer will receive two points. There are 5 correct answers in this section and only the first 5 circled answers will be graded. There is no partial credit.

- 2. An object moving along a straight line has it's velocity pointing in the opposite direction of it's position. Which *one* of the following statements concerning the object is *necessarily* true?
- [?] (a) The value of the acceleration is negative.
- [?] (b) The direction of the acceleration is in the opposite direction as the displacement.
- [?] (c) The direction of the acceleration is in the direction opposite to that of the velocity.
- [T] (d) The object is moving towards the origin.
- [?] (e) The object is slowing down.
- 3. An amoeba travels at a constant speed along a curved path as shown. Considering between the points P and Q, which of the following statements are true regarding this situation.
- [F] (a) The distance traveled is the same as the magnitude of the displacement.
- [F] (b) The magnitude of the average velocity is greater than the amoeba's constant speed.
- [T] (c) The magnitude of the average velocity is less than the amoeba's constant speed.
- [F] (d) The magnitude of the average velocity is equal to the amoeba's constant speed.

- [F] (e) The amoeba experienced zero acceleration the entire trip.
   [T] (f) The amoeba experienced both periods of zero and non-zero acceleration.
- 4. The table lists four variables along with their units. These variables appear in the below equations, along with a few numbers that have no units. Which of the equations are *not* dimensionally valid?

5. (4 points) Pressure is a physical quantity that describes a force per area. The International System of Units (SI) unit for pressure is called a Pascal (Pa), which is equal to a Newton (N) per meter squared. The atmospheric pressure on top of Mt. Everest is 33.7 kilopascals. Knowing that a pound (lb) is equal to 4.45 N and that 1 inch is equal to 2.54x10<sup>-5</sup> kilometers, determine the pressure on top of Mt. Everest in pounds per square inch (psi).

 $P = 33.7 \times 10^{3} P_{a}, P_{a} = \frac{N}{M^{2}}, IRb = 4.45N, Iinch = 2.54 \times 10^{5} km$   $\frac{1000 m^{2}}{M^{2}} = \frac{1000 m^{2}}{1.45N} = \frac{1.54 \times 10^{5} km}{1.45N} = \frac{1.89}{M} psi$   $\frac{1000 m^{2}}{M^{2}} = \frac{1.89}{1.45N} psi$   $\frac{1000 m^{2}}{1.45N} = \frac{1.89}{1.45N} psi$   $\frac{1000 m^{2}}{1.45N} = \frac{1.89}{1.45N} psi$   $\frac{1000 m^{2}}{1.45N} = \frac{1.89}{1.45N} psi$ 

6. (10 points) A goalie kicks a soccer ball straight vertically into the air. It takes 5.00 s for the ball to reach its maximum height *and* come back down to the level of the crossbar. Assume the crossbar of a soccer goal is 2.44 m above the ground. (a) How fast was the ball originally moving when it was kicked. (b) How much longer would it take the ball to reach the ground?

(a) 
$$\underline{K}$$
  $\underline{uk}$   $\underline{equations}$   
 $\Delta t = 5s$   $V_{\mathcal{E}}$ ? (i)  $\Delta x = V_{\mathcal{E}}\Delta t + \frac{1}{2}\partial\Delta t^{2}$   
 $\Delta t = 2.441m$   $V_{\mathcal{E}}$   $(ii)$   $V_{\mathcal{E}} = V_{\mathcal{E}} + a\Delta t$   
 $\Delta \vec{r}$   $A_{x} = -9.8 \cdot V_{\mathcal{E}}$   $(iii)$   $V_{\mathcal{E}}^{2} = V_{\mathcal{E}}^{2} + 2.0\Delta x$   
 $1 + \hat{x}$   $(i)$   $\Delta x = V_{\mathcal{E}}\Delta t + \frac{1}{2}a\Delta t^{2}$   
 $V_{\mathcal{E}} = \frac{\Delta x - \frac{1}{2}a\Delta t^{2}}{\Delta t} = \frac{24.988s}{\Delta t}$   
(b)  $V_{\mathcal{E}}$  some as (a) but  $\Delta x_{\mathcal{E}} = 0$   
 $\Delta \vec{x}_{\mathcal{E}} = 0$ ;  $\Delta t_{\mathcal{E}} + \frac{1}{2}a\Delta t_{\mathcal{E}}^{2}$   
 $\Delta t_{\mathcal{E}} = \frac{2V_{\mathcal{E}}}{-a} = 5.09959s$   
 $s_{v}$  a difference of 0.0996s
