

Traveling Waves

Foundation Stage (TW.2.L1)

Lecture 1

Wavelength, Frequency, Speed, Equations of Motion

Textbook Chapters (* Calculus version)

- o **BoxSand** :: KC videos ([Traveling Waves](#))
- o **Knight** (College Physics : A strategic approach 3rd) :: 14.1 ; 14.2 ; 14.3 ; 14.4
- o ***Knight** (Physics for Scientists and Engineers 4th) :: 15.1 ; 15.2 ; 15.3 ; 15.4
- o **Giancoli** (Physics Principles with Applications 7th) :: 11-1 ; 11-2 ; 11-3

Warm up

TW.2.L1-1:

Description: Using a graphing device, plot a sin function and determine its motion based on adding and subtracting a constant in the argument.

Learning Objectives: [?] - Can you identify the objectives from the previous lecture, and this lecture, that this question is relevant to?

Problem Statement: Using your favorite graphing device (e.g. graphing calculator, WolframAlpha, Mathematica, MATLAB, etc..) sketch the following plots on the given graphs below from $x = -\pi/2$ and $x = 2\pi$.

(a) $\sin(x)$

(b) $\sin(x - \pi/8)$

(c) $\sin(x + \pi/8)$

(d) What can you conclude about the direction of motion of the sin function if you subtract or add a value in the argument?

SUBTRACTING $\frac{\pi}{8}$ MOVES $\sin(x)$ TO THE RIGHT

ADDING $\frac{\pi}{8}$ MOVES $\sin(x)$ TO THE LEFT

Selected Learning Objectives

- Coming soon to a lecture template near you.

Key Terms

- Mechanical wave
- Electromagnetic wave
- Matter wave
- Gravity wave
- Transverse wave
- Longitudinal wave
- Combination of transverse and longitudinal waves
- Wavelength
- Wave number
- Wave speed
- Oscillator speed
- Snapshot graph
- History graph

Key Equations

--	--

Key Concepts

Questions

Act I: Classifying Waves

TW.2.11-2:

Description: Conceptual question about features of oscillators. (3 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: Which system would sustain a traveling wave if you wiggled the left most end?

TW.2.L1-3:

Description: Given graphs of potential energy vs position identify non-oscillatory motion. (3 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: Which of the following are necessarily true about traveling waves?

- T (1) Traveling waves transport energy from one location to another.
- T (2) Traveling waves are a collection of many oscillators.
- F (3) Traveling waves transport matter from one location to another.
- T (4) Traveling waves have a velocity that is dependent on the medium through which the wave travels.
- T (5) Traveling waves have a frequency determined by the source of the wave.

TW.2.L1-4:

Description: Conceptual question about features of oscillators. (2 minutes + 2 minutes + 2 minutes + 2 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: Match the wave phenomena with the wave type.

- (a) Crowd at sporting event. 4
- (b) Diffraction pattern of accelerated electrons through two small slits. 3
- (c) HAM Radio waves. 2
- (d) A ripple of space-time. 1
- (1) Gravity wave.
- (2) Electromagnetic wave.
- (3) Matter wave.
- (4) Mechanical wave.

TW.2.L1-5:

Description: Given graphs of potential energy vs position identify simple harmonic oscillators. (3 minutes).

Learning Objectives: [1, 12, 13]

Problem Statement: Match the wave phenomena with the mode of the wave.

- (a) Crowd at sporting event. 1 or 2
- (b) Earthquake wave. 3 S & P waves
- (c) Water wave. 3
- (1) Transverse wave.
- (2) Longitudinal wave.
- (3) Combination of transverse and longitudinal.

TW.2.L1-6:

Description: Given force equations as a function of displacement from equilibrium, identify which would give rise to simple harmonic motion. (3 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: A friend shows you a picture of a series of periodic ripple on the surface of a pond from a stone thrown into the pond.

(a) Your friend tells you the picture was taken 2.3 seconds after the source began emitting the wave. From this picture what can you determine?

- (1) Wave length.
- (2) Period.
- (3) Frequency.
- (4) Wave speed.
- (6) Amplitude.

$$\# \lambda = 7$$

$$\frac{7_{osc}}{2.3s} \approx 3 Hz \quad \text{or} \quad T = \frac{1}{3} s$$

(b) What if your friend showed you the picture and instead only told you that the outermost ripple is 10.0 m from the source of the ripples. What could you determine then?

- (1) Wave length.
- (2) Period.
- (3) Frequency.
- (4) Wave speed.
- (6) Amplitude.

$$\# \lambda = 7$$

$$\frac{10 m}{7} = 1.43 m$$

$\underbrace{\hspace{1.5cm}}_{\lambda}$

w/ (a) + (b) we can get V

$$V = f \lambda \approx 4.3 m/s$$

TW.2.L1-7:

Description: Conceptual question about period for simple harmonic motion. (2 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: With regards to traveling waves in one medium, which of the following are constants in both space and time?

- T¹ Wave speed.
- T² Frequency.
- F³ Oscillator speed.
- T⁴ Wavelength.
- F⁵ Displacement from equilibrium.

Act III: Equation Modeling

TW.2.L1-8:

Description: Conceptual question about equilibrium position for simple harmonic motion. (4 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: Consider the two snapshots of a wave pulse traveling along the x-direction. Assume the pulse does not change its shape in the time intervals we are interested in.

(a) What is the speed of the wave?

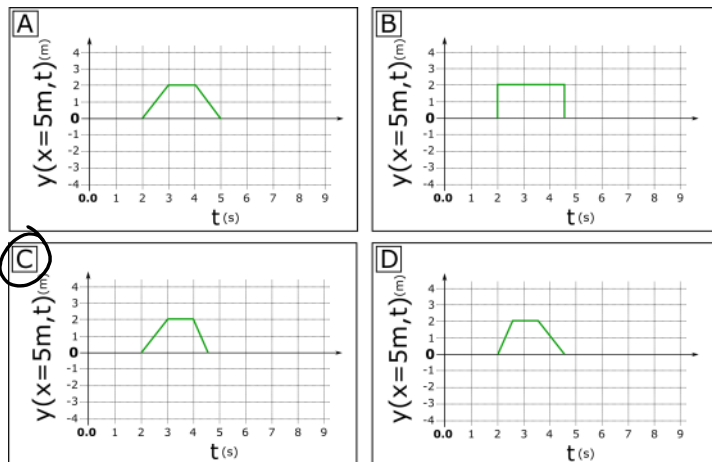

assume no a

$$v = \frac{\Delta x}{\Delta t} = \frac{1\text{m}}{1\text{s}} = 1\text{m/s}$$

(b) Sketch the wave pulse at t = 2 s, 3 s, 4 s, and 5 s.

(c) Which of the following plots represents the history graph for the wave pulse at x = 3 meters?

TW.2.L1-9:

Description: Complete an energy flow diagram for a SHO. (3 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: Consider the history plot for a traveling wave pulse that maintains its shape. The history plot was created at $x = 5$ m. Sketch snapshots of the wave pulse on the provided graphs given that the pulse has a speed of 1 m/s.

TW.2.L1-10:

Description: Conceptual question relating energy and amplitude of a simple harmonic oscillator. (3 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: A traveling wave is modeled by the equation $D(x,t) = 45 \sin(0.5x - 2t)$, where D and x are in meters, t is in seconds, and all other constants are in SI units.

(a) What is the amplitude of the wave?

45 m

(b) What is the period of the wave?

$\omega = 2$
 $\frac{2\pi}{T} = 2$
 $T = \pi \text{ s}$

(c) What is the wavelength of the wave?

$k = \frac{1}{2}$
 $\frac{2\pi}{\lambda} = \frac{1}{2}$
 $\lambda = 4\pi \text{ m}$

(d) What is the wave speed?

$v = f\lambda$
 $= \left(\frac{1}{\pi}\right)(4\pi)$
 $v = 4 \text{ m/s}$

(e) Does the wave travel in the positive x-direction or negative x-direction?

POSITIVE
 OPPOSITE SLOPE

(f) What mode of wave is this?

LONGITUDINAL
 OR
 TRANSVERSE

(g) A traveling wave is modeled by the equation $D(x,t) = 45 \sin(0.5x - 2t)$, where D and x are in meters, t is in seconds, and all other constants are in SI units. Sketch a snapshot of the wave at $t = 0$ s as a function of position. Include about two oscillations in both the positive and negative x region.

(h) A traveling wave is modeled by the equation $D(x,t) = 45 \sin(0.5x - 2t)$, where D and x are in meters, t is in seconds, and all other constants are in SI units. Sketch the displacement from equilibrium of the wave at $x = 0$ as a function of time. Include about two oscillations in both the positive and negative t regions.

$D(x=0,t)$

$D(x=0,t) = 45 \sin(0.5(0) - 2t)$
 $= 45 \sin(-2t)$

$$= 45 \sin(-2t)$$

$$= -45 \sin(2t)$$

SW IS AN
OAO FUNCTION

$$\sin(-x) = -\sin(x)$$

TW.2.L1-11:

Description: Energy analysis for a SHO. (6 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: A traveling wave is modeled by the graphical representations shown below, a snapshot and a history graph are shown below for $t = 0$ s and $x = 0$ s respectively.

(a) What is the amplitude of the wave?

$$\boxed{1.5 \text{ m}}$$

(b) What is the period of the wave?

$$\boxed{0.5 \text{ s}}$$

(c) What is the wavelength of the wave?

$$\boxed{2 \text{ m}}$$

(d) What is the wave speed?

$$v = \frac{\lambda}{\Delta t} = \frac{2}{0.5} = \boxed{4 \text{ m/s}}$$

(e) Does the wave travel in the positive x-direction or negative x-direction?

$\boxed{+ \text{ X-DIRECTION}}$ $\begin{matrix} \text{SWAP} \\ \sin \end{matrix}$ $\begin{matrix} \text{#IS} \\ -\sin \end{matrix}$

(f) What mode of wave is this?

$$\boxed{T \text{ or } L}$$

(g) Which of the following equations is a correct mathematical representation for this traveling wave assuming all constants are SI units?

$$\tau \textcircled{1} D(x,t) = 1.5 \sin(\pi x - 4\pi t)$$

$$f \textcircled{2} D(x,t) = 1.5 \sin(2x - 0.5t)$$

$$f \textcircled{3} D(x,t) = 1.5 \cos(2x - 0.5t)$$

$$\tau \textcircled{4} D(x,t) = -1.5 \sin(-\pi x + 4\pi t)$$

$$\omega = \frac{2\pi}{T} = \frac{2\pi}{\frac{1}{2}} = 4\pi$$

$$k = \frac{2\pi}{\lambda} = \frac{2\pi}{2} = \pi$$

TW.2.L1-12:

Description: Conceptual question about angular frequency vs angular velocity. (4 minutes)

Learning Objectives: [1, 12, 13]

Problem Statement: What is the frequency of this traveling wave?

$$v = f \lambda$$

$$f = \frac{v}{\lambda} = \frac{50 \text{ m/s}}{10 \text{ m}}$$

$$f \approx 5 \text{ Hz}$$

$$\lambda \approx 10 \text{ m}$$

TW.2.L1-13:

Description: Given a mass-spring system and initial conditions via written description and physical representation, identify the correct graphical representation. Find sign of velocities and accelerations at specific points. (3 minutes + 5 minutes + 5 minutes + 3 minutes).

Learning Objectives: [1, 12, 13]

Problem Statement: Two canoes are 10 m apart on a lake. Each bobs up and down with a period of 4.0 seconds. When one canoe is at

its highest point, the other canoe is at its lowest point. Both canoes are always within a single cycle of the waves. Determine the speed of the waves.
